TG

The HETRONIC TG pushbutton transmitter was originally designed for the industrial material handling market. The TG transmitter allows for one-handed operation and provides the operator with the familiar pendant-control feel.

Typical Applications:

While mostly used on overhead cranes in the industrial market, the TG transmitter is also used in applications such as rock-crushers, self-erecting tower cranes, boat lifts, mono-rails and much more.

The TG pushbutton transmitter is at home in steel mills and manufacturing facilities throughout the world. For many years, the unique feel and lightweight but rugged design of the TG transmitter has made operators' lives easier.

The TG is mostly used in standard configurations. However, it is also available as a complete customised system. Please contact Hetric and our engineering staff will tailor a TG system to fit your needs.

The TG system is designed to fit well into the operator's hand. The TG system offers dual-speed push buttons as well as E-Stop and Key-Switch.

Additional buttons for auxiliary functions can be integrated.

The TG systems are commonly used in combination with Hetric's RX 14-HL or RX 22-HL receivers.

TG transmitter, fully equipped with four-motion switches

About Hetric:

HETRONIC specialises in safety radio remote controls. Four manufacturing facilities and a network of distributors in over 45 countries provide maximum knowledge and support for our customers. We are confident that our innovative products will increase the safety and efficiency of your machines.
