

ERGO

- **One-Hand Operation**
- **Pendant Style**
- **Single or Dual Speed**

ERGO

The HETRONIC **ERGO** transmitter is originally designed for the industrial material handling market. It allows for one-handed operation and provides the operator with the familiar pendant-control feel.

Typical Applications:

While mostly used on overhead cranes in the industrial market, the **ERGO** transmitter is also used in applications such as rock-crushers, self-erecting tower cranes, boat lifts, mono-rails and much more.

The **ERGO** pushbutton transmitter is at home in steel mills and manufacturing facilities throughout the world. For many years, the unique feel and lightweight but rugged design of the **ERGO** transmitter has made the operator's life easier.

The **ERGO** is commonly used in combination with Hetric's popular RX 6, RX 14 or RX 22 receivers.

The **ERGO** is mostly used in its standard configurations. However, it is also available as a completely customised system. Contact Hetric and let our engineering staff tailor an **ERGO** system to fit your needs.

The **ERGO** system is designed to fit well into the operator's hand. The system offers single or double speed push buttons as well as E-Stop and Key-Switch. Additional buttons for auxiliary functions can be integrated.

Ergo transmitter with three motion, two-speed pushbuttons

About Hetric:

HETRONIC specialises in safety radio remote controls. Four manufacturing facilities and a network of distributors in over 45 countries provide maximum knowledge and support for our customers. We are confident that our innovative products will increase the safety and efficiency of your machines.
