- § Single or Dual Speed
- § Wireless Emergency Stop

MINI

The HETRONIC **MINI** is a small but powerful pushbutton transmitter that may be used for countless applications. It is designed for a market that requires a limited amount of digital functions and it is durable.

Typical Applications:

The **MINI** is typically used on small overhead cranes, under-hook equipment such as vacuum lifters and magnets, as well as mortar pumps and hook loaders. In its configuration as a wireless E-Stop, it can be utilised on virtually any machine or equipment that needs to be shut down from a distance.

All **MINI** systems are designed to fit in the palm of the operator's hands. When it is not in use, the **MINI** can be worn conveniently like a pager on the operator's belt.

The **MINI** system offers durable single- or dual-speed membrane switches which will withstand the toughest environment.

Hetronic offers the **MINI** in six different standards for quick delivery. It is powered by 3 AA batteries or by the optional rechargeable battery kit.

Remote Emergency-Stop:

The **MINI** V1 transmitter is designed as an Emergency-Stop system. Up to four operators can shut down the machine or equipment simultaneously, providing maximum safety when required. The **MINI** remote Emergency-Stop system is typically used on direction drills and conveyor systems.

Mini V5 with 3 motions, dual speed, start and stop button

Mini V2 with two-single-speed buttons, start and stop

Mini V1 with corresponding receiver component

About Hetronic:

HETRONIC specialises in safety radio remote controls. Four manufacturing facilities and a network of distributors in over 45 countries provide maximum knowledge and support for our customers. We are confident that our innovative products will increase the safety and efficiency of your machines.
